Aluminium nitride powder used as filler for semiconductor sealing - has
aluminium nitride particles bonded to a silanol group content
polyorganosiloxane film through a Al-O-Si group

Patent Assignee: TOSHIBA CERAMICS CO (TOSF); TOSHIBA SILICONE KK (TSIL)

Number of Countries: 001 Number of Patents: 001

Abstract (Basic): JP 11116213 A

NOVELTY - The powder has aluminium nitride (AlN) particles bonded to a silanol group content polyorganosiloxane film through a Al-O-Si group. DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for the manufacture of aluminium nitride powder. Silanol group content polyorganosiloxane was mixed with an organic solvent to form a coating solution. The solution was applied on the AlN particles and condensation of the Al-OH group and silanol group is carried out to form Al-O-Si bonding.

USE - Used as filler for semiconductor sealing.

ADVANTAGE - The powder excels in water resistance and heat conductivity. A polyorganosiloxane film of high strength and low peelability is provided on the powder. The powder is inexpensive.
